Anwar Lab Home Page

Welcome to the Anwar Lab focusing on in vivo cancer imaging using microfabricated smart devices.

My focus is to provide state of the art care for our patients while pushing the forefront of patient care with new imaging technologies capable of imaging the tumor from within the body itself.

We are currently hiring!

Patient Care

Please proceed to find out more information on our GI program, patient care materials, cancer information and clinical trials. We specialize in focal radiosurgery (SBRT) for pancreatic and liver tumors.

Research

The Anwar Lab focuses on implantable sensors for cancer monitoring, treatment and diagnosis. A significant portion of our work is geared towards imaging cancer at the microscopic level - using integrated circuits fused with biology.

People

Find out more about our Care team, and the scientists behind our research.

Contribute and Support our Efforts

Donate to the project of your choice.
